

WhitePaper Amendment.

Additional measures to support the LHCoin token rate.

The main function of #LHC tokens is to serve as a means of payment accepted by the LH-Crypto broker as a margin security to trade financial assets.

To maintain the #LHC token price after it is accepted as a margin security, we will destroy 3% of commission fee earned by the broker on the trading volume, and we will destroy 5% of tokens now they are converted to fiat money. For insurance, we have developed a motivation system for our token holders, which depends on the amount of tokens and the time they are held on a trading account.

These measures are conducted in order to support the token price growth and to encourage potential investors to purchase tokens.

We are going to create a special token fund from the tokens accumulated in possession of LH-Crypto as commission fee from our clients for operations on financial assets. The fund will contain 20% of the tokens earned as commission fee.

We will sell the tokens from this fund, but we will only do it once a month to maintain the liquidity level.

These sales will be available for all the LH clients, yet the price for tokens will vary and will be different from the exchange rate, depending on the amount of tokens a client holds according to the Proof of Hold.

The clients of a crypto broker who will use tokens instead of cryptocurrencies as a margin security will receive special preferable terms. These are: more profitable trading conditions, higher priority for withdrawal, etc. All of this will make #LHC even more profitable for their owners.
